These include: When you highlight text in an image, with the basic tools, the tools use a smart name, linked to a dictionary file. When you create a new layer, include the layer name. You can even save your new layer name permanently so your files don't get too messy. **What It Does:** The Gradient tool is designed to smooth the appearance of your edges and blend the colors of your image to create subtle shading, soft edges, and other cool effects. When you use this tool, you can create hand-drawn lines, gradients, and vector shapes that you can then edit. To finish, you just apply one or more of the blending tools to achieve your desired effect. This tool will also create fabulous looking vignettes for your images. **What It Does:** Brightness & Contrast is a function that you can use to adjust the overall appearance of your images. This function makes slight adjustments to the overall lighting, like lighten or darken areas of a photo. **What It Does:** The Dodge & Burn tool is used to lighten or darken the overall tone of your image and bring out its highlights and shadows. This tool can be used to lighten or darken your image in whichever areas you'd like, such as dust, paper, or the bottom of a building. 933d7f57e6
