Downloading images from the web is convenient, but it can often result in images being compressed or distorted by the website or email provider. The original format of the image can also not be restored, so you are liable to lose some quality when editing in Photoshop. TIFF files (which usually result from scanning images) are used more widely for the print industry than the web. However, some websites or print providers incorrectly handle TIFF files and they can be extremely large. The final quality is usually only as good as the original source images and can result in large files. Downloading images to a desktop computer can be time and disk space consuming if the download method is not ideal. It can also be difficult to get images off of a website if they are heavily compressed. Some websites, especially social media and news websites, direct users to download the webpage files. The next major release will be Photoshop CC 2015.
